

nwgi - 32" x 48" MDO Sandwich Board

Layout Guidelines

nwgi - 32" x 48" MDO Sandwich Board

Make sure you are using the right guide!

nwgi has several different sandwich board models that have **different print sizes**. Using the wrong template will delay your project and will require a new file with the correct size to be submitted.

What size should I make my file?

Your file should be sized 33" x 48.75". The following page contains an actual-size guide that can be placed into your file as a separate layer while you working on your file. PLEASE MAKE THE GUIDE LAYER INVISIBLE IN YOUR SUBMITTED FILE - failure to do so will cause the cut line to be present on the final print.

The guide includes a 1/2" bleed around the print, shown in red. Please bleed your design out to the red perimeter. The black line is the crop-to line. It is highly recommended that you don't have type or essential graphics too near the black cut line because it may get cropped.

What Resolution should my files be?

nwgi recommends at least 150ppi at the size your file will be printed.

What type of file should I submit?

For full color sandwich boards, nwgi recommends creating a PDF using the "Press Quality" setting. Make the guide layer invisible. The PDF file you submit should be 33"x48.75".

For cut vinyl sandwich boards, a vectorized EPS, Illustrator file may be submitted. ALL FONTS MUST BE CONVERTED TO OUTLINES AND ALL GRAPHICS MUST BE VECTORIZED -- NO RASTER GRAPHICS For specific file prep tips, color choices, and limitations please refer to our cut vinyl file guide.
