Quick Sign

Make sure you are using the right guide!

nwgi has several different models that have **different print sizes**. Using the wrong template will delay your project and will require a new file with the correct size to be submitted.

What size should I make my file?

Your file should be sized 24"x18". It is highly recommended that you don't have type in the corners or close to the edges of your print.

What Resolution should my files be?

nwgi recommends at least 150ppi at the size your file will be printed.

What type of file should I submit?

nwgi recommends creating a PDF using the "Press Quality" setting. Do **not** place crop marks or extended bleeds. The PDF file you submit should be 24"x18".

We do accept different file types like Adobe Illustrator, InDesign, Photoshop and others. If you submit a native file you **MUST CONVERT ALL FONTS TO OUTLINES** and embed all your graphics.

24"

18"

File size should be
24"x18"

**VIEWABLE SIZE IS
24"x18"**

Perfect for Open Houses or directional signs, the Quick Sign features replaceable panels so you can update without buying all new hardware!
