

# X-Stands

from nwgi | NW Graphic Imaging

# 11" x 17"

## Make sure you are using the right guide!

nwgi has several different X-Stand models that have **different print sizes**. Using the wrong template will delay your project and will require a new file with the correct size to be submitted.

## What size should I make my file?

Your file should be sized 11" x 17". It is highly recommended that you don't have type go to the corners because a grommet may go through it. The grommets on this X-Stand are 1/4" in diameter.

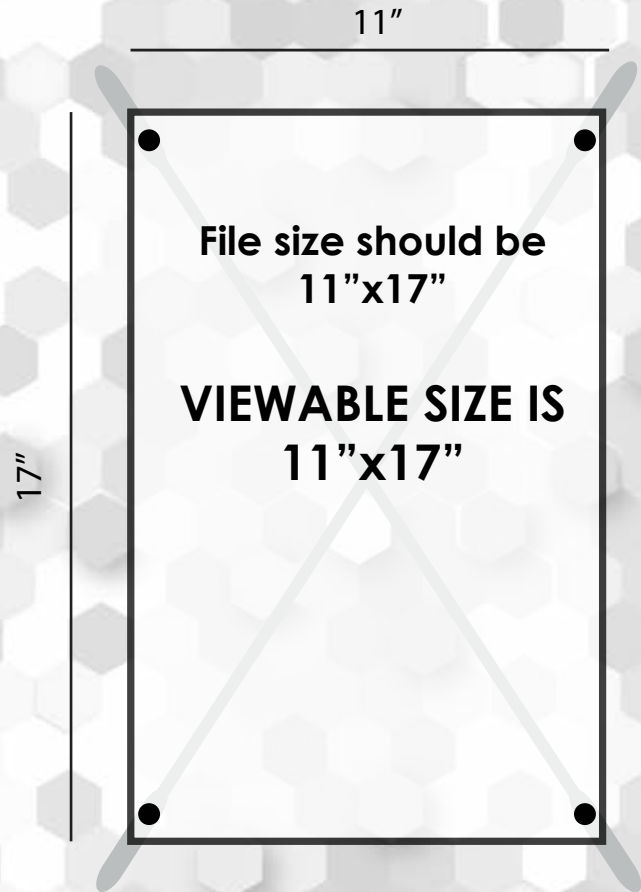

## What Resolution should my files be?

nwgi recommends at least 150ppi at the size your file will be printed.

## What type of file should I submit?

nwgi recommends creating a PDF using the "Press Quality" setting. Do **not** place crop marks or extended bleeds. The PDF file you submit should be 11"x17".

We do accept different file types like Adobe Illustrator, InDesign, Photoshop and others. If you submit a native file you **MUST CONVERT ALL FONTS TO OUTLINES** and embed all your graphics.

Our X-Stands are made with 13oz. banner. An extra durable 1,000 x 1,000 denier strength and are printed with outdoor UV eco-solvent inks. Completely waterproof and wind resistant these banners will stand the test of time.

All X-Stands come with grommets in the 4 corners.
